# MUHAMMAD SAMEER

Web Developer

+92 319 7099383 isameerilyass29@gmail.com Rawalpindi, Pakistan

## ABOUT ME

Motivated Computer Science student with hands-on experience in AI-based systems, web development, and real-time applications. Skilled in building scalable solutions using Python, TensorFlow, and REST APIs. Passionate about solving real-world problems through intelligent systems and modern technologies.

## EDUCATION

2022-2026

Bachelor of Science in Computer Science **KICSIT**

## INTERNSHIP

**Frontend Developer Intern |** Intled.io

**Remote** | Internship

- Developed and maintained frontend modules using Angular and TypeScript for a Student Consultancy Portal.
- Built responsive and user-friendly interfaces that improved the student application and consultation experience across devices.
- Integrated frontend components like Angular with RESTful APIs to enable seamless communication with backend services.
- Implemented features for student registration, profile management, application tracking, and consultant interactions.
- Collaborated with designers and developers to translate business requirements into functional web solutions.
- Utilized Git and GitHub for version control, code reviews, and collaborative development.

**Frontend Developer Intern |** Softlinks

**Onsite**| Internship

- Developed responsive and user-friendly web interfaces using HTML5, CSS3, JavaScript, and Bootstrap.
- Converted UI/UX designs into clean, reusable, and maintainable frontend components.
- Designed the database schema for students, consultants, applications, documents, and appointments
- Created ER diagrams and normalized tables (up to 3NF) to remove redundancy and support future features without schema rework.
- Ensured cross-browser compatibility and adherence to modern web development best practices.
- Defined API request/response contracts aligned with the database schema, keeping frontend models
- Used Git/GitHub for version control and team collaboration.

**Frontend Developer**

intled.io | On-site | Full-time

- Developed and maintained modular frontend features in Angular and TypeScript, using a component-based architecture with lazy-loaded feature modules and reusable shared components.
- Integrated RESTful APIs through Angular services and HttpClient, using RxJS observables for async data and HTTP interceptors for JWT token attachment, loading states, and centralized error handling.
- Implemented student registration and profile management with Reactive Forms, including custom and async validators and clear inline error messages.
- Secured the app with route guards and role-based access control for separate student, consultant, and admin views.
- Improved performance with lazy loading, OnPush change detection, and trackBy in lists.
- Used Git and GitHub for version control, with feature branching, pull requests, and code reviews.

## PROJECTS

**Blaze Shield (Final Year Project)**

Technologies: Python, Machine Learning, Raspberry Pi 5, IP Camera, Android

- Developed an AI-powered fire and smoke detection system using computer vision and machine learning.
- Integrated real-time monitoring through IP cameras for continuous surveillance.
- Designed an automated alert system to notify emergency services and users.
- Implemented smart sprinkler activation based on fire location and severity.

---

## SKILLS

**Languages:** Python, Java, C#, JavaScript,BootStrap

**Frontend :** HTML5, CSS3, JavaScript, Angular, React

**AI/ML :** TensorFlow, CNN, Computer Vision, OpenCV

**Tools :** Flask, Firebase, Git, IP Camera Systems

**Concepts :** OOP, DBMS, Real-Time Systems, Debugging

**Database & Tools :** Firebase, DBMS, Git, REST APIs

**Backend :** Node.js, Express.js, Flask
